Function problems

Function problems

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

• But also backbones, autarkies, MES, primes, etc.

$(\bar{x}_1 \lor \bar{x}_2)$ (x_1) $(x_5 \lor x_6)$ $(\bar{x}_3 \lor \bar{x}_4)$ (x_2) (x_3) (x_4)

• Formula is unsatisfiable but not irreducible

An example – MUSes

$$(\bar{x}_1 \lor \bar{x}_2)$$
 (x_1) $(x_5 \lor x_6)$ $(\bar{x}_3 \lor \bar{x}_4)$ (x_2) (x_3) (x_4)

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへで

- Formula is unsatisfiable but not irreducible
- Can remove clauses, and formula still unsatisfiable

$$(\bar{x}_1 \vee \bar{x}_2) (x_1) (x_5 \vee x_6) (\bar{x}_3 \vee \bar{x}_4) (x_2) (x_3) (x_4)$$

- Formula is unsatisfiable but not irreducible
- Can remove clauses, and formula still unsatisfiable
- Minimal Unsatisfiable Subset (MUS):
 - Irreducible subformula that is unsatisfiable
 - MUSes are minimal sets

An example – MUSes

$$(\bar{x}_1 \lor \bar{x}_2)$$
 (x_1) $(x_5 \lor x_6)$ $(\bar{x}_3 \lor \bar{x}_4)$ (x_2) (x_3) (x_4)

- Formula is unsatisfiable but not irreducible
- Can remove clauses, and formula still unsatisfiable
- Minimal Unsatisfiable Subset (MUS):
 - Irreducible subformula that is unsatisfiable
 - MUSes are minimal sets

An example – MUSes

$$(\bar{x}_1 \lor \bar{x}_2)$$
 (x_1) $(x_5 \lor x_6)$ $(\bar{x}_3 \lor \bar{x}_4)$ (x_2) (x_3) (x_4)

- Formula is unsatisfiable but not irreducible
- Can remove clauses, and formula still unsatisfiable
- Minimal Unsatisfiable Subset (MUS):
 - Irreducible subformula that is unsatisfiable
 - MUSes are minimal sets
- Many applications: abstraction in software verification; debugging declarative models; pinpointing in DLs; type error debugging; etc.

$(\bar{x}_1 \lor \bar{x}_2)$ (x_1) $(x_5 \lor x_6)$ $(\bar{x}_3 \lor \bar{x}_4)$ (x_2) (x_3) (x_4)

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

• Formula is unsatisfiable with satisfiable subformulas

$$(\bar{x}_1 \vee \bar{x}_2) (x_1) (x_5 \vee x_6) (\bar{x}_3 \vee \bar{x}_4) (x_2) (x_3) (x_4)$$

- Formula is unsatisfiable with satisfiable subformulas
- Can remove clauses such that remaining clauses are satisfiable

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

$$\bar{x}_1 \vee \bar{x}_2$$
 (x_1) $(x_5 \vee x_6)$ $(\bar{x}_3 \vee \bar{x}_4)$ (x_2) (x_3) (x_3)

- Formula is unsatisfiable with satisfiable subformulas
- Can remove clauses such that remaining clauses are satisfiable
- Minimal Correction Subset (MCS):
 - Irreducible subformula such that the complement is satisfiable

MCSes are minimal sets

$$(\bar{x}_1 \lor \bar{x}_2)$$
 (x_1) $(x_5 \lor x_6)$ $(\bar{x}_3 \lor \bar{x}_4)$ (x_2) (x_3) (x_4)

- Formula is unsatisfiable with satisfiable subformulas
- Can remove clauses such that remaining clauses are satisfiable
- Minimal Correction Subset (MCS):
 - Irreducible subformula such that the complement is satisfiable

MCSes are minimal sets

$$(\bar{x}_1 \lor \bar{x}_2)$$
 (x_1) $(x_5 \lor x_6)$ $(\bar{x}_3 \lor \bar{x}_4)$ (x_2) (x_3) (x_4)

- Formula is unsatisfiable with satisfiable subformulas
- Can remove clauses such that remaining clauses are satisfiable
- Minimal Correction Subset (MCS):
 - Irreducible subformula such that the complement is satisfiable

MCSes are minimal sets

$$(\bar{x}_1 \lor \bar{x}_2)$$
 (x_1) $(x_5 \lor x_6)$ $(\bar{x}_3 \lor \bar{x}_4)$ (x_2) (x_3) (x_4)

- Formula is unsatisfiable with satisfiable subformulas
- Can remove clauses such that remaining clauses are satisfiable
- Minimal Correction Subset (MCS):
 - Irreducible subformula such that the complement is satisfiable
 - MCSes are minimal sets
- Many applications: restore consistency; smallest MCSes are MaxSAT solutions; MUS enumeration; minimal/maximal models; etc.

Enumeration problems

- MCS enumeration is easy:
 - Extract & block MCSes, e.g. with MaxSAT or dedicated algorithm

- Extract one prime implicant for *F* in CNF:
 - Find satisfying assignment μ of F
 - Drop literals from μ while F satisfied
- Similar for prime implicate with *F* in DNF and falsifying assignment

- Extract one prime implicant for *F* in CNF:
 - Find satisfying assignment μ of F
 - Drop literals from μ while F satisfied
- Similar for prime implicate with *F* in DNF and falsifying assignment
- How about the general case of prime implicates for CNF, prime implicants for DNF, or primes for non-clausal?
- And, how about enumeration of primes?
 - Repeated application of procedure above does not work...

• Given CNF *F*, with $F \models \bot$:

• Given CNF *F*, with $F \models \bot$:

- $M \subseteq F$ is a Minimal Unsatisfiable Subset (MUS) iff:

 $M \vDash \bot \land \forall_{M' \subsetneq M} M' \nvDash \bot$

• Given CNF *F*, with $F \vDash \bot$:

- $M \subseteq F$ is a Minimal Unsatisfiable Subset (MUS) iff:

 $M \vDash \bot \land \forall_{M' \subsetneq M} M' \nvDash \bot$

- $S \subseteq F$ is a Maximal Satisfiable Subset (MSS) iff:

 $S \nvDash \bot \land \forall_{S \subsetneq S' \subseteq F} S' \vDash \bot$

• Given CNF *F*, with $F \vDash \bot$:

- $M \subseteq F$ is a Minimal Unsatisfiable Subset (MUS) iff:

 $M \vDash \bot \land \forall_{M' \subsetneq M} M' \nvDash \bot$

- $S \subseteq F$ is a Maximal Satisfiable Subset (MSS) iff:

 $S \nvDash \bot \land \forall_{S \subsetneq S' \subseteq F} S' \vDash \bot$

- $C \subseteq F$ is a Minimal Correction Subset (MCS) iff:

 $F \setminus C \nvDash \bot \land \forall_{C' \subsetneq C} F \setminus C' \vDash \bot$

・ロト・日本・モー・ モー シック

• Given CNF *F*, with $F \vDash \bot$:

- $M \subseteq F$ is a Minimal Unsatisfiable Subset (MUS) iff:

 $M \vDash \bot \land \forall_{M' \subseteq M} M' \nvDash \bot$

- $S \subseteq F$ is a Maximal Satisfiable Subset (MSS) iff:

 $S \nvDash \bot \land \forall_{S \subsetneq S' \subseteq F} S' \vDash \bot$

- $C \subseteq F$ is a Minimal Correction Subset (MCS) iff:

 $F \setminus C \nvDash \bot \land \forall_{C' \subseteq C} F \setminus C' \vDash \bot$

- An MCS C is the complement (wrt to F) of an MSS S, $C = F \setminus S$

• Given CNF *F*, with $F \vDash \bot$:

- $M \subseteq F$ is a Minimal Unsatisfiable Subset (MUS) iff:

 $M \vDash \bot \land \forall_{M' \subsetneq M} M' \nvDash \bot$

- $S \subseteq F$ is a Maximal Satisfiable Subset (MSS) iff:

 $S \nvDash \bot \land \forall_{S \subsetneq S' \subseteq F} S' \vDash \bot$

- $C \subseteq F$ is a Minimal Correction Subset (MCS) iff:

 $F \setminus C \nvDash \bot \land \forall_{C' \subseteq C} F \setminus C' \vDash \bot$

- An MCS C is the complement (wrt to F) of an MSS S, $C = F \setminus S$
- Each MCS (resp. MUS) of F is a minimal hitting set of the MUSes (resp. MCSes) of F

- Group of clauses i, G_i
- Set of groups of clauses $\Gamma = \{G_1, \ldots, G_k\}$

- Group of clauses 0, *G*₀, denoting a set of background (or don't care) clauses
- Group of clauses i, G_i
- Set of groups of clauses $\Gamma = \{G_1, \ldots, G_k\}$
- Conjunction of clauses in all groups unsatisfiable:

 $\bigwedge_{\substack{G_i \in G_0 \cup \Gamma \\ c \in G_i}} (c) \vDash \bot$

- Group of clauses 0, *G*₀, denoting a set of background (or don't care) clauses
- Group of clauses *i*, *G_i*
- Set of groups of clauses $\Gamma = \{G_1, \ldots, G_k\}$
- Conjunction of clauses in all groups unsatisfiable:

 $\bigwedge_{\substack{G_i \in G_0 \cup \Gamma \\ c \in G_i}} (c) \vDash \bot$

• Group MUS, $\Psi \subseteq \Gamma$:

$$\bigwedge_{\substack{G_i \in G_0 \cup \Psi \\ c \in G_i}} (c) \vDash \bot \land \forall_{\Psi' \subsetneq \Psi} \bigwedge_{\substack{G_i \in G_0 \cup \Psi' \\ c \in G_i}} (c) \nvDash \bot$$

• Recall definition of prime implicate $p \subseteq c$:

 $F \vDash (\lor_{l \in q} I) \land \forall_{q' \subsetneq q} F \nvDash (\lor_{l \in q'} I)$

• Recall definition of prime implicate $p \subseteq c$:

$$F \vDash (\lor_{l \in q} I) \land \forall_{q' \subsetneq q} F \nvDash (\lor_{l \in q'} I)$$

• Can be rewritten as:

 $F \land \land_{l \in q}(\neg l) \vDash \bot \land \forall_{q' \subsetneq q} F \land \land_{l \in q}(\neg l) \nvDash \bot$

• Recall definition of prime implicate $p \subseteq c$:

$$F \vDash (\lor_{l \in q} I) \land \forall_{q' \subsetneq q} F \nvDash (\lor_{l \in q'} I)$$

• Can be rewritten as:

 $F \land \land_{l \in q}(\neg l) \vDash \bot \land \forall_{q' \subsetneq q} F \land \land_{l \in q}(\neg l) \nvDash \bot$

• Reduction:

[BM07]

- Start from implicate c
- Formula F corresponds to background group G_0
- Each literal *l* of *c* represents a group with a unit clause $(\neg l)$
- Each group MUS represents prime implicate of F given c

• Recall definition of prime implicate $p \subseteq c$:

$$F \vDash (\lor_{l \in q} I) \land \forall_{q' \subsetneq q} F \nvDash (\lor_{l \in q'} I)$$

• Can be rewritten as:

 $F \land \land_{l \in q}(\neg l) \vDash \bot \land \forall_{q' \subsetneq q} F \land \land_{l \in q}(\neg l) \nvDash \bot$

Reduction:

[BM07]

- Start from implicate c
- Formula F corresponds to background group G_0
- Each literal *l* of *c* represents a group with a unit clause $(\neg l)$
- Each group MUS represents prime implicate of F given c
- Note: F is a (possibly non-clausal) propositional formula

• Recall definition of prime implicant $p \subseteq t$:

```
(\wedge_{I \in p} I) \vDash F \land \forall_{p' \subsetneq p} (\wedge_{I \in p'} I) \nvDash F
```

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

• Recall definition of prime implicant $p \subseteq t$:

```
(\wedge_{I \in p} I) \vDash F \land \forall_{p' \subsetneq p} (\wedge_{I \in p'} I) \nvDash F
```

• Can be rewritten as:

 $(\neg F) \land (\land_{l \in p} I) \vDash \bot \land \forall_{p' \subsetneq p} (\neg F) \land (\land_{l \in p'} I) \nvDash \bot$

• Recall definition of prime implicant $p \subseteq t$:

```
(\wedge_{l \in p} I) \vDash F \land \forall_{p' \subseteq p} (\wedge_{l \in p'} I) \nvDash F
```

• Can be rewritten as:

 $(\neg F) \land (\land_{I \in p} I) \vDash \bot \land \forall_{p' \subsetneq p} (\neg F) \land (\land_{I \in p'} I) \nvDash \bot$

• Reduction:

[BM07]

- Start from implicant t
- Formula $\neg F$ corresponds to background group G_0
- Each literal / of t represents a group with a unit clause (1)
- Each group MUS represents prime implicant of F given t

• Recall definition of prime implicant $p \subseteq t$:

```
(\wedge_{l \in p} I) \vDash F \land \forall_{p' \subseteq p} (\wedge_{l \in p'} I) \nvDash F
```

• Can be rewritten as:

 $(\neg F) \land (\land_{l \in p} I) \vDash \bot \land \forall_{p' \subsetneq p} (\neg F) \land (\land_{l \in p'} I) \nvDash \bot$

• Reduction:

[BM07]

- Start from implicant t
- Formula $\neg F$ corresponds to background group G_0
- Each literal / of t represents a group with a unit clause (1)
- Each group MUS represents prime implicant of F given t
- How to compute group MUSes?

• Many algorithms, based on calls to SAT oracles:

• Recap SAT-based approach for CNF formulae:

$H = L \cup C \cup B$

- L: Disallow $x_v = x_{\neg v} = 1$, for each pair $\{x_v, x_{\neg v}\}$
- C: Encode clauses of F with new variables
- B: Block computed prime implicants
- For non-clausal formulae, the problem is how to represent *C*, since *F* is not in CNF

- Unrealistic to convert non-clausal formulae to CNF

• Recap SAT-based approach for CNF formulae:

$H = L \cup C \cup B$

- L: Disallow $x_v = x_{\neg v} = 1$, for each pair $\{x_v, x_{\neg v}\}$
- C: Encode clauses of F with new variables
- B: Block computed prime implicants
- For non-clausal formulae, the problem is how to represent *C*, since *F* is not in CNF

- Unrealistic to convert non-clausal formulae to CNF
- And cannot introduce Tseitin variables
 - Primes not preserved

• Recap SAT-based approach for CNF formulae:

$H = L \cup C \cup B$

- L: Disallow $x_v = x_{\neg v} = 1$, for each pair $\{x_v, x_{\neg v}\}$
- C: Encode clauses of F with new variables
- B: Block computed prime implicants
- For non-clausal formulae, the problem is how to represent *C*, since *F* is not in CNF
 - Unrealistic to convert non-clausal formulae to CNF
 - And cannot introduce Tseitin variables
 - Primes not preserved
- Idea: Construct *C* on demand as the algorithm executes; terminate when *B* blocks all primes and *C* equivalent to *F*

Experimental setup

- Server: Intel Xeon E5-2630 2.60GHz, 64GByte
- TO: 3600s
- MO: 10 GByte
- Tools:
 - primer: PRIMe compilER
 - zres-tison

[SdV01]

- Benchmarks:
 - Quasigroup classification problems: 83
 - Cryptanalysis of the Geffe stream generator: 600
 - Crafted $F_m \vee PHP_n$: 30

$$F_m = (x_1 \vee y_1) \wedge \cdots \wedge (x_m \vee y_m)$$

- ▶ $m \in \{10, ..., 20\}$
- ▶ $n \in \{6, ..., 10\}$
- Crafted $F_m \vee GT_n$: 30
 - ▶ $n \in \{12, \ldots, 20\}$

Summary of results

	QG6	Geffe gen.	F+PHP	F+GT	Total
